

## Important Message to Superyacht Captains – Get it Taped!

New from PSP Marine Tapes is Spray Stop, designed to prevent spray of fuel, hot water or steam from burst pipes, pipe joints, flanges, boilers, exhaust manifolds, silencers and engine installations. Spray Stop tape is now a requirement under SOLAS Regulation 11-2/15.2.11. Spray Stop is an essential, low cost requirement for every marine engine room! It is a multi-layer aluminium and glass cloth, coated with a high performance, heat resistant silicon adhesive. Available in two widths of 25mm or 50mm, each pack is measured into one-metre lengths for the retail market and can be ordered in various widths by 10m rolls for the commercial market. The tape is easy to apply and quickly able to prevent leakage and splashing from hot, dangerous flammable liquids or steam.
