

## AMI MARINE - The Problem Solvers

### World Leaders in Bridge Retransmission and Interfacing Solutions.

Following ongoing expansion of their production facilities in the UK, AMI Marine (UK) Limited is confident to continue claiming the title of World Leaders in analogue and digital retransmission systems for the marine industry.

AMI was at the forefront of change in marine electronics around the early 80s, taking the old electro-mechanical systems and producing the more flexible, and dependable solid state technology of today. AMI subsequently designed and developed a range of highly reliable marine interfacing products, moving the industry further into the modern world.

AMI can boast the widest range of marine retransmission and interfacing products on the market today, incorporating the latest technology, which is also capable of upgrading older systems to meet modern day requirements.

Another factor in the progressive and solid growth of their client base is that AMI products are installed and serviced globally by their in-house trained engineers. Products are backed by an excellent web-based "Tech Talk" service, providing live on-line one to one client support during working hours and auto email alerts 24/7. The company has an ongoing policy to continually improve their existing products and the AMI development team monitor and evaluate client feedback, enabling them to develop new products aligned to the shipping industry's exacting needs.

## NEW PRODUCTS

More new products are on-line for production launch in 2009 and 2010, all of which will be manufactured in the UK. These will assist Captains and operators to manage and control ships' systems efficiently, on time and within budgets.

## EUROPORT 2009

AMI invite all ship owning and operating decision makers to visit their stand (No 8.216) at Europort in November 09 and view their exciting range of products, all of which are aids to navigation. Europort runs from Tuesday 3rd – Friday 6th November 2009.
