

Complete Container Service from Complete Marine Freight

The logistics of moving containers around the world is a vital component for the success of any global yacht racing campaign and the experienced staff at Complete Marine Freight are extremely well practiced in ensuring crucial race support equipment and spares arrive on time and at the right place.

When working to tight schedules, any delays in the arrival of spares or equipment can delay race preparation prior to the event or even in the worst case, lose a regatta. Complete Marine Freight are the proven experts, ensuring that documentation is correct and shipments not subject to customs delays.

If your container is not in free circulation within the EU, Complete Marine Freight's skilled staff can advise the most efficient method of EU temporary importation. They can also advise how you can programme to recover VAT for new equipment you may purchase for your project.

When shipping urgent goods around the world, part loads can be consolidated to save on shipping costs. Urgent packages can also be expedited as transit goods and globetrotting race teams are often better served using an ATA carnet, which provides the racing yacht with a 'Merchandise Passport' permissible in more than 70 countries.

Container customised fit out

Complete Marine Freight can arrange many other container services such as the supply of new and used containers, survey, inspection, plating, fitting out and electrical systems. Containers can be fitted with internal doors offering natural light and an air conditioned environment for work or office area, along with customised racking and even a gantry crane to move heavy equipment and sails. Complete Marine Freight also offers a plating reminder service, when the inspection is due which is directed straight to a designated inbox.

Complete Marine Freight, based in Palma and England, offer a comprehensive personal service to Project Managers and Captains who do not have time or resources to arrange these regular, essential logistic services.
