

> HYS Architectural Rigging

HYS Rigging has built its world-renowned reputation on the exacting science of high-technology marine rigging systems and now brings its expertise and experience to the architectural rigging market.

HYS Rigging provides engineered solutions for internal and external structures, delivering attractive, lightweight and durable systems. Rod or cable can be used on balustrading for platforms and balconies, stairways and walls and for more lightweight structures such as canopies and awnings.

Dennis Fisher, HYS Rigging manager, states "HYS Rigging brings cutting edge marine trade innovation from high-technology yachts, such as the Americas Cup fleet, to the architecture market. Cost-effective, custom designed systems will be provided, with full engineering back-up, and in-house fabrication facilities that meet the specifications of the most demanding projects."

Systems can be supplied in component form for own installation or services can be provided by HYS Rigging. Contact rigging@hambleyachtservices.co.uk for further details.

High quality cable & rod rigging
