

## SMOOTHING THE WAY

**PRO-SAIL MANAGEMENT** offers global project management for large yachts. With a huge knowledge of the industry, they can provide solutions for new builds or refits, as well as installation or retrofit of new systems, above and below decks. Pro-Sail Management has instigated a range of measurable processes, which are customised to suit an individual owner or captain's needs. To underpin this, they are able to manage the logistics of each individual project to ensure that clients meet their business and personal deadlines.

Many captains of large yachts have endorsed PRO-SAIL's attention to detail, whether management of a refit project or urgent logistical planning for immediate repairs to minimise downtime on charter. The staff at Pro-Sail have a vast knowledge of the industry and benefit from long standing relationships with naval architects and superyacht yards worldwide.

PRO-SAIL MANAGEMENT works with worldwide classification codes and offers a management and reporting service, to ensure that projects are kept on track, within legislative or individual requirements and to a budget. Each individual project is carefully planned and completed to the highest standards, keeping everyone involved and informed at every stage.

Tim Watson, a Director at Pro-Sail Management, said, "*We understand the investment which an owner gives to his yacht both in terms of time and money and we are there to support a captain and crew when the unexpected happens*".
